

Emissions Categories

The GHG protocol standard categorises emissions depending on where they are generated. 7 greenhouse gases are tracked; CO₂, CH₄, N₂O, HFC, PFC, SF₆, NF₃; summarised as the equivalent amount of Carbon Dioxide that would give the same warming effect or "CO₂e".

Scope 1

Emissions produced directly by your operations

Fuels used in your facilities

Fuels used in your vehicles

Greenhouse gases released or escaped

Scope 2

Emissions produced indirectly by your operations

Purchased electricity, steam, heating & cooling for own use

Scope 3 Upstream

Emissions produced by your supply chain

Business travel

Purchased goods & services

Capital goods

Transportation & Distribution

Processing of sold products

Use of sold products

Transportation & Distribution

Waste from operations

Employee commuting/teleworking

End of life of sold products

Leased (to) assets

Franchises

Leased (from) assets

Upstream emissions from energy purchased

Energy sold

Land-based

Land you manage or own.

Investments

Land-based emissions

Land-based Removals

Carbon Credits

Funding carbon reduction or removal elsewhere

Carbon Reductions

Carbon Removals

Future Removals

Avoided Emissions

Activities to reduce others' emissions

Supplier/Customer Reductions

Recycling/Reuse

Low-carbon products
